Applicant(s)

CHANG ET AL.

Examiner

Stella L. Woo

Art Unit

2643

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 November 2003.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-18,22-26 and 28-30 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-3,5-18,22-26 and 28-30 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 5-18, 22-26, 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boling et al. (US 6,226,510 B1, hereinafter "Boling") in view of Loomis et al. (US 5,625,668, hereinafter "Loomis").

Boling discloses a method for distributed notification, the method comprising:

receiving a location signal from a remote device associated with a subscriber (private emergency response service receives location and identify information from phone/pager 10; col. 4, lines 4-28; col. 5, lines 1-4; col. 6, lines 19-39);

storing a contact profile (response service maintains a list of persons to contact; col. 4, lines 1-4);

providing to each of the plurality of contacts a respective notification message (the private service forwards the emergency caller's location and identify information to each person on the list; col. 4, lines 4-11).

Boling differs from the claims in that it does not specify determining from the location signal a street address. However, Loomis teaches the desirability of converting latitude and longitude data into street address format using indexed databases (col. 2, lines 30-59) such that it would have been obvious to an artisan of ordinary skill to incorporate such conversion of

location data, as taught by Loomis, within the method of Boling in order to provide location information in a format which is more helpful to the recipient.

Regarding claim 2, a notification message is transmitted to the public emergency response service (col. 4, lines 26-30; col. 10, lines 16-30).

Regarding claim 3, location data is received from GPS receiver 64 (col. 6, lines 22-30; col. 10, lines 16-25).

Regarding claim 5, location information includes longitude/latitude coordinates (col. 4, lines 20-21; col. 10, lines 19-24).

Regarding claims 15-16, the triggering event is the activation of the emergency button 20 (col. 3, lines 55-64; col. 6, lines 52-56).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boling and Loomis, and further in view of Markowitz et al. (US 6,295,346 B1, hereinafter "Markowitz").

The combination of Boling and Loomis differs from claims 7-9 in that it does not specify providing a text notification message. However, Markowitz teaches the desirability of communicating an emergency notification message to a predefined set of parties in the form of an e-mail message in lieu of a voice message (col. 7, lines 34-45, 51-53) such that it would have

Art Unit: 2643

been obvious to an artisan of ordinary skill to incorporate such use of e-mail, as taught by Markowitz, within the method of Boling and Loomis in order to allow for the option of e-mail notification.

Regarding claims 8-9, Markowitz provides for using a template (col. 7, lines 45-50).

The combination of Boling and Loomis differs from claims 10-12, 25, in that it does not explicitly provide for voice notification or telephone connection. However, Markowitz teaches the desirability of communicating an emergency notification message by synthesized voice (col. 4, lines 6-45) such that it would have been obvious to an artisan of ordinary skill to incorporate such use of a synthesized voice message, as taught by Markowitz, within the method of Boling and Loomis when notifying each contact over the telephone system.

Regarding claims 11-12, Markowitz uses a voice template to form a notification message (col. 4, lines 10-45).

3. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over the combination Boling and Loomis, and further in view of McCurdy (US 6,340,928 B1).

The combination of Boling and Loomis differs from claim 17 in that it does not provide for the detection of an automobile collision. However, McCurdy teaches the well known use of collision detection (vehicle crash sensing system 40) as a triggering event to automatically placing an emergency call (Abstract) such that it would have been obvious to an artisan of ordinary skill to incorporate such collision detection, as taught by McCurdy, within the method of Boling and Loomis in order to automatically report an emergency from a vehicle in response to a collision in case the user is not physically able to activate the emergency button.

Art Unit: 2643

4. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Boling and Loomis, and further in view of Pons et al. (US 5,805,670, hereinafter "Pons").

The combination of Boling and Loomis differs from claim 18 in that it does not specify the notification message containing the status of the event. However, Pons teaches the desirability of including ongoing incident details within the notification message (col. 1, lines 45-48, 58-62; col. 11, lines 14-16) such that it would have been obvious to an artisan of ordinary skill to incorporate such reporting of event status, as taught by Pons, within the method of Boling and Loomis so that other can be apprised of the latest state of events, such as the destination medical treatment facility to which the 911 caller is being transported.

5. Claims 24 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Boling and Loomis, and further in view of Tsumpes (US 6,442,241 B1).

The combination of Boling and Loomis differs from claims 24 and 26 in that it does not specify the contact profile as including a contact type associated with each contact or contact via Internet connection. However, Tsumpes teaches the desirability of communicating an emergency notification message to a list of contacts in a variety of ways, such as voice, pager, voice mail, fax and e-mail (which takes place over the Internet), with the subscriber account record indicating the formats in which a message is to be communicated for each contact (Abstract; Figure 4; col. 6, lines 10-23) such that it would have been obvious to an artisan of ordinary skill to incorporate such use of a variety formats, as taught by Tsumpes, within the method of Boling and Loomis in order to provide options as to how each contact is to be notified.

Response to Arguments

6. Applicant's arguments with respect to claims 1-3, 5-18, 22-26, 28-30 have been considered but are moot in view of the new grounds of rejection.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Revell et al. and Kass show other locating systems which convert latitude and longitude coordinates into a street address.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 2643

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stella L. Woo whose telephone number is (703) 305-4395. The examiner can normally be reached on Monday-Tuesday, Thursday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on (703) 305-4708. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
